Reference Value  
Negative

Result suggests one of the following possible conditions:

1) simultaneous acute or chronic coinfection with HBV and HDV;  
2) acute HDV infection in patients with known chronic HBV infection (ie ,HDV superinfection); 3) resolved HDV infection; or 4) false-positive result. Result should be correlated with medical history and clinical findings. Testing for HDV RNA in the same serum specimen can be requested to distinguish among these 3 possible conditions.
